

COMP3511/9511 Human Computer Interaction

Tutorial and Laboratory 6 (Week 3)

Agenda

- Assignment 2 Group Work and Marking - *110 minutes*
- Wrap Up – *10 minutes*

Aim

In this laboratory, your tutor will mark the next checkpoint of your Assignment 2 documentation, and whilst the marking is happening you will get an opportunity to continue working on your Assignment 2 also for the next deliverable.

Assignment 2 Checkpoint Marking

110 minutes

There is an assignment checkpoint this week relating to your documentation, which will be marked by your tutor in class. **You need to bring all your completed documentation along to class, as you will not have time to complete anything in this tutorial.**

The documentation that will be checked includes (you should now be up to and including Step 12 in the Assignment 2 specification):

- *Revised Product Description Statement (30 words)*
- *Final set of Context Scenarios 2-3 scenarios (1 page per scenario, maximum)*
- *Requirements list (1-2 pages)*
- *Questionnaire and Interview Summary (1-2 pages)*

Whilst this is being marked, you should start working on your low fidelity prototypes in preparation for your next deliverable.

In this tutorial, your tutor will also conduct a quick (2-3 minutes) usability test demonstration, using a participant from the class. Your tutor will take the position of the facilitator and will demonstrate the correct language and manner in which you should conduct your usability tests. In your own time, you should also watch the Usability Testing demo video that is posted in Moodle for this week, in preparation for next week's tutorial.

We will also discuss the roles of observers in a usability test and reiterate the Think Aloud Protocol.

Wrap-up

10 minutes

Consider and reflect in your design diary:

- What is the importance of the Think Aloud Protocol?
