COMP3511/9511 Human Computer Interaction

Tutorial and Laboratory 3 (Week 2)

Agenda
- Assignment 2 work – 90 minutes
- Marking – *30 minutes*

Aim

The online Ethics Quiz is now available for you to complete. You are required to obtain full marks in this quiz to proceed with Assignment 2 work. Please try and have this quiz completed prior (or after) to attending the tutorial.

This lab will involve getting into our Assignment 2 groups and starting to brainstorm and conceptualise some ideas for your work. You will firstly form group of four students with your tutor's help. You will then commence work on your first deliverable for Assignment 2. Create a group in Teams for your group to work in and add your tutor as a member of this group for marking purposes. Use this collaborative space for your group to keep tabs of your brainstorming and documentation. This will be a space where you can keep all the documentation that you will be delivering. Your first deliverable (product definition statement) is due at the end of this lab. The tutor will be marking these in the last thirty minutes of the scheduled lab time in random order.

Assignment 2 Group Work
90 minutes

Assignment 2 has now been released. In the groups that you have formed on Moodle prior to this lab, you should spend a few minutes familiarizing yourselves with what is required and Teams in the Assignment spec. You will spend time brainstorming individually first about different products that you may want to design. You will then get together with your group in your online collaborative space and discuss a shared vision based on everyone's ideas. Who is your intended audience and what is your product going to be? Feel free to tag your tutor in any questions you may have (@theirname), they will also check into your space during this hour to find out how you are going. Your tutor will come into your breakout room, and you will provide them with a brief of what you are doing for comment and feedback. You will be creating your Product Description Statement as part of this exercise. Make sure to keep a repository of this statement on your Teams space. Any online collaboration should be occurring within your Teams space and your collaborative OneNote space.
